

AVIT/TVRF263 : Aerial Video Production

This course is designed for the remote aircraft pilot interested in learning to use a small-unmanned aircraft for professional photography and videography. Topics include but are not limited to visual sensors, flying techniques, pre and post processing, and flight planning. Students will create a product portfolio containing samples of their work. This course requires 15 hours of fieldwork.

Credits 1

Lecture Hours 1

Lab/Clinical/Field Study Hours 1
